Sep 14, 2015 - Alright, time to perform compute the contour (i.e. Outline) of the green ball.. h, USB PIC18 h, usb\_function\_cdc h, usb\_function\_cdc c and add them to the MPLAB X project.

Some steps I did and may be useful for you First, let's create a stand alone project: 1) I assume you have downloaded and installed the MAL (Microchip Application Libraries).. Now the problem is that the demo project provided by Microchip is written so that it can be burned on different devices, with different circuits, or with different conditions - that makes it large, and for me at least, harder to understand.. If someone could hopefully just provide a working code with minimal comments for this microcontroller or something similar OR link me to a good tutorial, it would make my life MUCH MUCH easier Thanks..
